New Yorkers Making a Desperate of Meetings in Excess of That of over property in the territories." Auy Previous Campaign.

New York, Oct. 29.-Notwithstanding the quiet appearance of the different politi cal headquarters today, a creat deal of ac live political work was in progress both and outside and there is no doubt that the leaders of all the organizatious trefully alive to the fact that only a week remains before the day of election. All express the utmost confidence of success, So far as the city is concerned the Tammany men place great reliance on their ough organization and even their opponents admit that the full Tammany rote will be poiled. The adherents of the committee of Seventy's ticket base their street in the committee of Seventy's ticket base their seventh of the committee of Seventy's ticket base their seventh of the committee of of belief in winning upon the conviction that there will be regardless of ordinary politirai meth d., an "nyri-ing of p-opis" such as overthrew the Tammany raie in 1871. Much of the quiet work done today was tire cod toward detecting frauds in registration and towards arranging to get to the polis without fail all who are duly registered. Men who seldom take an active part in politics are laboring to make converse of personal friends and there has seldom been a campaign in which there were more private political discussions. Perhaps the most important incident of the day was the attempt of an evening newspaper to implicate Calonel Strong in an old matter involving leavings towards

Many theories have been proposed to explain the absence of forests in large portions of the great infand basis of the United States, including both prairies which plains which lie west of that stream. new explanation for the absence of in this area has intely been offered in the center Geographical Journal by J. W. Redway. He holds that seeds have been mainly carried and distributed through the agency of water, and that the spread of forest growth without this natural aid or some artificial aid would be very slow. He argues that our treeless regions have never been overflowed by running streams since they became dry land, and come forest seed. Wherever the water of running streams has spread seeds have been cording to this view, these regions have always teen freeless, and therefore Mr. Hed way considers that the nature of the soil quereux and Professor Whitney, and
